

點滴照顧指導(Infusion care)-英文版

1. 注射肢體可自由活動不受限制，但要注意肢體活動是否影響點滴的流速。

Infusion patients can move freely.

2. 點滴請放置比注射部位高，若有回血情形，請將注射部位放低。

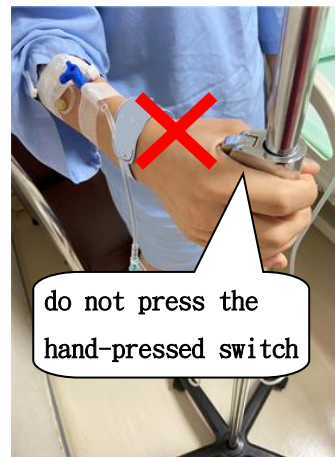

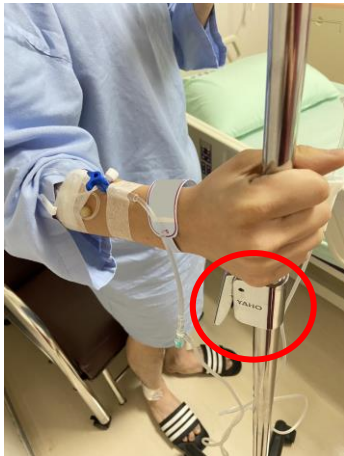

Hang the infusion containers higher than the infusion area which should be lowered if with the blood reflux.

3. 點滴滴數請勿任意調動。

Increase no infusion speed freely.

4. 下床行走時使用點滴架，不要壓到手壓式開關，以免造成點滴位置太低。

When getting out of bed and walking, use the IV stand and do not press the hand-pressed switch to avoid causing the drip position to be too low.

5. 注射部位如有紅、腫、熱、痛、潮濕情形，或有任何問題，請告知護理人員。

Notify the nursing personnel if the infusion area is red, swollen, feverish, painful, or humid or you have any other questions.
